No MSDS/SDS for lithium cells and lithium batteries required

Dear Sir or Madam,

regarding your inquiry concerning the requirement to provide a Material Safety Data Sheet (MSDS/SDS) for lithium cells and lithium batteries, the official position is as follows:

A Material Safety Data Sheet (MSDS/SDS) is not required for lithium cells and lithium batteries, as cells and batteries are classified as "articles" in the REACH Regulation and not as hazardous substances.

For the transport of lithium cells and batteries as dangerous goods according to the global dangerous goods transport regulations, only a test summary in accordance with subsection 38.3.5 of the UN Manual of Tests and Criteria needs to be provided. This document must be retained by the cell/battery manufacturer or the equipment manufacturer and made available to anyone in the supply chain upon request.

Kind regards,

Eva Glimsche

CEO of ABS All Battery Service GmbH
